

We understand your marketing needs! We will be happy to help you with shortening time to market and avoiding pitfalls during certification by providing full technical support from early design stages!

We organize professional training at the client's facility!

We can guide you through the certification process, contact us for detailed information!

Electrical Safety Lab provides technical support and training in the following fields:

- | | |
|---|--|
| <ul style="list-style-type: none"> ▪ Applicable safety standard determination | <p><i>We can help you with selecting an applicable safety standard according to the product type and target market</i></p> |
| <ul style="list-style-type: none"> ▪ Agency mark determination | <p><i>We can advise on the differences between the marks of various agencies and assist you with choosing the right one for your specific purpose.</i></p> |
| <ul style="list-style-type: none"> ▪ Product reviews and pre-certification testing | <p><i>We can evaluate your product from the early design stages and identify flaws or potential issues.
Our biggest advantage is professional support from the very beginning of your project. We believe that evaluating the equipment design at its early stages saves huge amounts of time and money for the manufacturer. We can check electrical schematics, layouts and other documentation even before you have a prototype.</i></p> |
| <ul style="list-style-type: none"> ▪ Safety critical components | <p><i>We can assist you with selection of correct components for your product</i></p> |
| <ul style="list-style-type: none"> ▪ CE mark technical documentation preparation | <p><i>We can assist you with preparation of the technical product file required for CE marking (Technical File and Declaration of Conformity)</i></p> |
| <ul style="list-style-type: none"> ▪ Organized professional training and technical support | <p><i>We can provide comprehensive information regarding various certification schemes operating worldwide and related certification requirements, training on application of specific standard requirements.</i></p> <p><i>We can organize professional educational seminars customized for specific needs of your technical staff at your location. We can guide your staff how to take care of all safety related issues from the product planning stage.
Our seminars will answer many questions you have regarding international certification.</i></p> |

Benefits of using our support from the early design stages:

- Faster feedback on design
- Lower certification costs – redesign costs are avoided
- Shorter certification time – no need to invest time in redesign
- Coordinated effort and better schedule control – no pitfalls at the late design stage
- Shorter time to market
